Here is the link to my GitHub Repository:
https://github.com/Sairamasubash/FinishedWebApp

Hi, I made a webpage that acts as a Marvel Avengers Employment page. It holds the information of the Avengers and the departments that they work in. I have completed this page using React.js and Django. I used many react components along with API endpoints (such as GET, POST, and DELETE). Also, I have 5 Avengers in the database, and they show up in the frontend page,

In the link to my GitHub Repository above, you will find this project. I used .gitignore on the node_modules folder as always. You should be able to download/clone the repository to test out the project. However, if you are having trouble running the code yourself, I am including pictures of both the frontend and the backend below.

Thank you so much for your consideration,
Sairamasubash Muppalaneni

# Marvel Avengers Employment

## Iron Man

**Weapons**

## Hulk

**Scientist**

## Vision

**Artificial Intelligence**

**Iron Man**

Weapons

**Hulk**

Scientist

**Vision**

Artificial Intelligence

**Hawkeye**

Security

**Black Widow**

Human Resources
